Novel peptide comprising leukocyte antigen binding peptide of human CD45 polypeptide, useful for producing activated cytotoxic T lymphocytes, for killing cancerous cells e.g. leukemia.

Claim 2; Page 38; 56pp; English.

The invention discloses a peptide comprising the human leukocyte antigen (HLA)-binding peptide of human CD45 polypeptide, its portion or variant, provided that the peptide is not the intact human CD45 polypeptide. The peptides are useful for producing activated cytotoxic T lymphocyte (CTL) in vitro which involves contacting the CTL with an antigen-presenting cell, where its major histocompatibility complex (MHC) class I molecules are loaded with the peptide, to activate, in an antigen specific manner, where the CTL and the antigen presenting cell are allogenic with respect to the class I MHC molecule that is presenting peptides of CD45. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antigen-presenting cell contains an expression vector including the polymucleotides encoding the CD45 peptides. The activated CTLs are useful CF for killing, and in the manufacture of a medicament for, target cells coxpressing the CD45 peptides in a patient. A T cell receptor (TCR), creognising cells expressing the CD45 peptides, is useful for killing CF target cells (cancer cells) in a patient which involves obtaining CTLs tree tree patient, introducing into the CD45 peptides, is useful for killing CF from the patient, introducing into the CTLs the polymucleotide encoding the TCR and then introducing the cells thus produced into the patient who has undergone an allogenic stem cell transplantation. Tumour reactive CF the inhibition of colony forming unit-granulocyte macrophage (CFU-GM) colony formation. The cancer is leukaemia which expresses the CD45 colony formation. The cancer is leukaemia which expresses the CD45 colony formation is useful as an immunotherapeutic for treating a patient with haematopoietic malignancy or to target and kill cells which express the CD45 polypeptide. The advantage this method provides is that the CTLs destroy the malignant haematopoietic cells but not the cransplanted cells. The sequence presented is the peptide, huCD45/684, cc comprising an HLA-binding peptide of human CD45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

01-MAR-1991;
16-AUG-1993;
                    The invention relates to an isolated RNA encoding a protein tyrosine phosphatase designated as PTPH1 appearing as ADD22982. Also included is a retroviral vector comprising the RNA. The RNA is useful for treating or preventing a condition in which abnormally high levels of phosphotyrosine occur in a mammalian cell (which involves introducing into the mammalian cell and agent which comprises DNA or RNA encoding all or a portion of a PTPH1, under conditions sufficient to express PTPH1 where the polypeptide can catalyse dephosphorylation of tyrosyl residues that are phosphorylated through action of a protein tyrosine kinase. The RNA is also useful for reversing a malignant phenotype of a mammalian cell which is associated with tyrosyl phosphorylation catalysed by a protein tyrosine kinase. The DNA or RNA is delivered via a recombinant retrovirus or a recombinant vaccinia virus. At least one tyrosyl residue that is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               phosphatase activity. The method is useful for identifying a compound that modulates the phosphotyrosine phosphatase activity of a polypeptide and for identifying susceptibility to cancer, diabetes or other diseases associated with alterations in cellular phosphotyrosine metabolism. The present sequence is human leukocyte common antigen (ICA) phosphatase domain (PD) 1. This sequence is used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       04-DEC-1996;

                                                                                                                                              The present invention provides substrate trapping mutant protein tyrosine phosphatases (PTPs). They can be used to reduce the activity of tyrosine phosphorylated proteins and to screen for modulators capable of altering the binding of protein tyrosine phosphatases to their substrate. These may be used in disease diagnosis and treatment
                                                                                                                                                                                                                 New substrate trapping mutant protein tyrosine phosphatases which the wild type PTP catalytic domain invariant aspartate with an unphosphorylated amino acid, useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    aberrantly phosphorylated by pp60(V-src). The RNA is useful for or preventing malignancies such as breast cancer and leukaemia. present sequence is a PTP similar to PTPH1.

The methods are useful for performing screening assay to identify agents that alter PTP binding to and PTP-mediated catalytic dephosphorylation of phosphotyrosine peptide substrates. The present sequence is that of a catatlytic domain of a PTP for comparison with human PTPIB (AAG78262)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Screening assays to identify agents that alter protein typhosphatase (PTP) binding to, and PTP-mediated catalytic dephosphorylation of phosphotyrosine peptide substrates.

cc mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this co polypeptide, is useful for treating cancer. The polypeptide is also cc useful for identifying compounds that binds to this to class I or class I Mic-binding polypeptide. The polypeptide is also co polynucleotides are particularly useful for treating or preventing cmyeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, clambar or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
  New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity chemotactic/chemokinetic activity, haemostatic activity, haemostatic activity, haemostatic contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tang YT,

CC The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease, protease inhibitor, CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified CC polypeptide. The purified polypeptide, or the antibody that binds to this CC polypeptide is useful for treating cancer. The polypeptide is also CC useful for identifying compounds that binds to a naturally processed CC class I or class II MHC-binding polypeptide. The polypeptides and CC polynucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, Clymphoma or leukaemia. These are also useful for screening agents for CC treating the above mentioned diseases. This sequence represents an CC expressed protein tag (RPT) isolated from human tissue for translational CC specification but was obtained in sequence in the printed CC specification but was obtained in sequence of translational CC specification but was obtained in sequence for translations in the printed CC ftb, who, inthinhall-had not sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Crecombinant nucleic acid or expression vector, a microarray for detecting comprising at least 10 contiguous nucleotides of any of the above-comprising at least 10 contiguous nucleotides of any of the above-comprising at least 10 contiguous nucleotides of any of the above-comprising at least 10 contiguous nucleotides of any of the above-components of a CA sequence selected from any of the 95 cc mentioned nucleotide sequences as mentioned in the specification, or its complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above cc monoclonal antibody, a pharmaceutical composition comprising the above cc antibody and a pharmaceutical excipient, a kit for detecting cancer cells (comprising the presence or absence of cancer cells in an individual, a method for delivering a therapefucial for disposing cancer correct of a method for delivering a therapefucial segent to cancer cells in an individual, a method for delivering a therapefucial segent to cancer cells in an individual, an electronic library comprising the above polypeptide (or their fragments), methods of screening composition and treating cancer activity or for a bioactive agent to cancer cells in an activity or for a bioactive agent capable of modulating cassociated with expression of a polypeptide in a test cell sample, a method for treating cancers and a method for inhibiting the expression of a second for treating cancers and methods are useful for detecting, diagnosing, preventing and treating cancers, especially lymphoma and cleukaemia. These may also be used in screening for agents that modulate cancer data for this patent did not form part of the printed cancer in tryoning the cancer is a human CAP protein format directly from WIPO art from wino introning or the sequence is a human cap part of the printed capable of methods are useful for detecting.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The novel detection merror myccardial infarction. The novel detection merror myccardial infarction. The invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myccardial infarction and for preparing a composition for treating or preventing myccardial infarction. This sequence represents the protein of a human myccardial infarction associated gene containing one or more SNP's of the invention. Note: This sequence has come from the specification. The sequence has come from the MIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP in such caid molecule; a method of detecting a variant polypeptide; and a method for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method has cardiant activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method for identifying a protein tyrosine phosphatase (PTP) that is reversibly oxidized in a cell by: (i) subjecting a sample, including a cell that contains at least one PTP, to conditions that cause reversible oxidation of PTP; (ii) isolating PTP anaerobically, in presence of a sulfhydryl-reactive agent (II) that irveversibly modifies the thiol group of an invariant Cys in the active site of PTP; and (iii) determining, under reducing conditions, the level of dephosphorylation, caused by PTP, of a labelled substrate (III), where dephosphorylation indicates that an active PTP is present. No details of tests for these activities are given. The method is used to identify reversibly oxidized PTP, also to identify agents that: (a) reversibly modify such PTP; or (b) alter inducible signalling pathways in which PTP are involved. These agents are potentially useful, in human or veterinary medicine, for treating abnormal cell proliferation or growth (cancer); medicine, for treating abnormal cell proliferation or growth (cancer);

The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an account of the color of the col
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-MAR-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinnoma, sercoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an

                                                                                                                                                                                                                                                                              The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cycoskeletal protein, receptor or transcription factor. polypeptide is useful as an immunogenic composition for eliciting in mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypucleocides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, parcoma, melan lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an
                                                                                                                                                                                                                                    expressed protein tag (EPT) isolated from human tissue for treprofiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-MAR-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease, protease inhibitor. The Cramporter, cytoskeletal protein, receptor or transcription factor. The CC transporter cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified CC polypeptide. The purified polypeptide or the antibody that binds to this CC polypeptide. The pulypeptide is also useful for identifying compounds that binds to a naturally processed CC class I or class II MHC-binding polypeptide. The polypeptides and CC class I or class II MHC-binding polypeptide. The polypeptides and CC polynucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an CC expressed protein tag (EPT) isolated from human tissue for translational CC specification but was obtained in electronic format directly from WIPO at Cfr purpo in/mph/published por semence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for identifying a protein tyrosine CC phosphatase (PTP) that is reversibly oxidized in a cell by: (i) CC subjecting a sample, including a cell that contains at least one PTP, to conditions that cause reversible oxidation of PTP; (ii) isolating PTP CC anaerobically, in presence of a sulfhydryl-reactive agent (II) that creversibly modifies the thiol group of an invariant Cys in the active cell te of PTP; and (iii) determining, under reducing conditions, the level CC of dephosphorylation, caused by PTP, of a labelled substrate (III), where CC dephosphorylation indicates that an active PTP is present. No details CC of tests for these activities are given. The method is used to identify CC reversibly oxidized PTP, also to identify agents that; (a) reversibly CC modify such PTP; or (b) alter inducible signalling pathways in which PTP CC are involved. These agents are potentially useful, in human or veterinary CC medicine, for treating abnormal cell proliferation or growth (cancer); guest vs. host disease; autoimmune diseases; allergy or other CC abnormalities. This sequence represents one of the PTP enzyme of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                  Human

A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease, protease inhibitor. The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified CC polypeptide. The purified polypeptide, or the antibody that binds to this CC polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed CC class I or class II MHC-binding polypeptide. The polypeptides and CC polynucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, Imploma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an CC treating the above mentioned diseases. This sequence represents an CC expressed protein tag (BPT) isolated from human tissue for translational CC specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancer-associated proteains. Also included are an expression vector comprising the above recombinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least no expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least no expression vector, an increase of the above comprising at least 10 contiguous nucleotides of any of the above comprising at least and contiguous nucleotides of any of the above complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above colls (comprising the antibody cited above, methods for diagnosing cancer cells (comprising the antibody cited above, methods for diagnosing cancer cells (comprising the presence or absence of cancer cells in an individual, a method for inhibiting growth of cancer cells in an conditional control of a cancer cells in an antibody and a pharmaceutical composition comprising the above of an individual, a method for delivering a therapeutic agent to cancer cells in an antibody control of a cancer cells in an antibody control of cancer cells in an antibody control of a cancer cells in an antibody control of cancer cells in an antibody contro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The composition and methods are useful for detecting, diagnosing, preventing and treating cancers, especially lymphoma and leukaemia. These may also be used in screening for agents that modulate cancer. The present sequence is a mouse CAP protein sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma and leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1157 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                          with the decreased expression or overexpression of KPP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. They can also be used in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of KPP. The KPP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-FEB-2003; 2003US-0449059P.

                                                                                                                                               CC altered risk for myocardial infarction in the individual. The invention CC further comprises; an isolated nucleic acid molecule comprising at least CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in CC the specification or its complement and encoding any one of the amino CC acid sequences given in the specification; an isolated polypeptide CC comprising an amino acid sequence given in the specification; an antibody CC that specifically binds to the polypeptide or its antigen-binding CC that specification and which is between about 16 and 1000 nucleotides in CC length; a kit for detecting an SNP in a nucleic acid, comprising the CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a complete containing an CC myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The composition for treating or preventing myocardial infarction. This composition for treating or preventing myocardial infarction. This cased cisted gene containing one or more SNP's of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.

                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                              This invention relates to a novel method for identifying genes that are cover-expressed in adipose tissue and as such it provides targets for anti co-besity pharmaceutical compositions. Specifically, it refers to a high combility group I-C protein (HMGI-C) that is associated with obesity and combility group I-C protein (HMGI-C) that is associated with obesity and combility group I-C protein (HMGI-C) that is associated with obesity and composition describes performing differential gene expression analysis to invention describes performing differential gene expression analysis between the white adipose tissue (MAT) or stromal vascular tissue (SVT) composition of any two different mice selected from a group consisting of wild-type, composition that are adipocyte specific, and as such can be used for preventing adipogenesis, diagnosing and treating diabetes, obesity, compounds that can modulate or prevent adipogenesis and treat diabetes or compounds that can modulate or prevent adipogenesis and treat diabetes or compounds that can modulate or prevent adipogenesis and treat diabetes or compositions exhibit amorectic, antidiabetic and compositions exhibit amorectic and compositions exhibit amorectic and the invention.
                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, and individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein encoded by an mRNA sequence of the invention which show altered expression in renal transplantation and expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 rejection, e.g. cardiac or kidney transplant rejection, in an indi-
comprises detecting the expression level of one or more genes. The

The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The invention correlated risk for myocardial infarction in the individual. The invention correct risk for myocardial infarction in the individual. The invention correct risk for myocardial infarction in the individual. The invention correct risk for myocardial infarction in the individual. The invention correct risk for its complement and encoding any one of the amino correct sequence given in the specification; an sNP given in the specification; an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding corresponding and which is between about 16 and 1000 nucleotides in the specification and which is between about 16 and 1000 nucleotides in the correct risk for detecting an SNP in a nucleic acid, comprising the composition for the invention may be used in gene therapy. The nucleic acid molecule; a method of detecting a variant polypeptide; and a composition for treating or preventing wocardial infarction. This sequence represents the protein of a human myocardial infarction. This sequence was not shown in the specification. The sequence has come from correct sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.

                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                          cc phosphatase (PTP) that is reversibly oxidized in a cell by: (i)

Cc subjecting a sample, including a cell that contains at least one PTP, to

cc conditions that cause reversible oxidation of PTP; (ii) isolating PTP

cc anaerobically, in presence of a sulfhydryl-reactive agent (II) that

criversibly modifies the thiol group of an invariant Cys in the active

cc site of PTP; and (iii) determining, under reducing conditions, the level

cc of dephosphorylation, caused by PTP, of a labelled substrate (III), where

cc dephosphorylation indicates that an active PTP is present. No details

cc of tests for these activities are given. The method is used to identify

creversibly oxidized PTP, also to identify agents that: (a) reversibly

cc modify such PTP; or (b) alter inducible signalling pathways in which PTP

cc are involved. These agents are potentially useful, in human or veterinary

cc medicine, for treating abnormal cell proliferation or growth (cancer);

cc guest vs. host disease; autoimmune diseases; allergy or other

cc inventions. This sequence represents one of the PTP enzyme of the
                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to polypeptide, is useful for treating concer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypuclectides are particularly useful for treating or preventing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. polypeptide is useful as an immunogenic composition for eliciting in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease, protease inhibitor. The Crytoskeletal protein, receptor or transcription factor. The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide or the antibody that binds to this CC polypeptide. The purified polypeptide or the antibody that binds to this CC class I or class II MHC-binding polypeptide. The polypeptides and CC class I or class II MHC-binding polypeptide. The polypeptides and CC polynucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, Imploma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an CC expressed protein tag (EPT) isolated from human tissue for translational CC specification but was obtained in electronic format directly from WIPO at CF public in the printed protein the printed content of the protein the printed protei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             28-MAR-2001; 2001US-0279495P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO as the province of the province of the province of the printed specification but was obtained in electronic format directly from WIPO as the province of the pr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for identifying a protein tyrosine CC phosphatase (PTP) that is reversibly oxidized in a cell by: (i) subjecting a sample, including a cell that contains at least one PTP, to conditions that cause reversible oxidation of PTP; (ii) isolating PTP anaerobically, in presence of a sulfhydryl-reactive agent (II) that create it is the thiol group of an invariant Cys in the active it reversibly modifies the thiol group of an invariant Cys in the active conditions, the level of dephosphorylation, caused by PTP, of a labelled substrate (III), where condephosphorylation indicates that an active PTP is present. No details of tests for these activities are given. The method is used to identify reversibly oxidized PTP, also to identify agents that: (a) reversibly modify such PTP; or (b) alter inducible signalling pathways in which PTP are involved. These agents are potentially useful, in human or veterinary medicine, for treating abnormal cell proliferation or growth (cancer); guest vs. host disease; autoimmune diseases; allergy or other immunosuppressed states; metabolic disorders and cell-cycle abnormalities. This sequence represents one of the PTP enzyme of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                               Considerable of the gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention of further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis; in a mammal context than a mouse; diagnosis of rheumatoid arthritis in a mammal specific for rheumatoid arthritis; and reduced arthritis; and reducing the symptoms associated with collagentinuced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic, antigout, antiinflammatory, dermatological, and immunomodulatory. The composing and treating autoimmune disease or arthritis, gout, juvenile rheumatoid arthritis, and an immune disease caused by an infectious agent. This sequence represents a protein sequence relating to the genes used in the analysis and treatment of collagenetic serious serious caused by an infectious agent. This sequence is not shown the specification. It has been supplied in an electronic format from the specification. It has been supplied in an electronic format from the specification. It has been supplied in an electronic format from the specification. It has been supplied in an electronic format from the specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         invention describes performing differential gene expression analysis between the white adipose tissue (WAT) or stromal vascular tissue (SVT) of any two different mice selected from a group consisting of wild-type, HMGI-C -/-, ob/ob, or HMGI-C -/-, ob/ob genotype mice. Accordingly, using this method novel nucleotides and the encoded proteins thereof were identified that are adipocyte specific, and as such can be used for preventing adipogenesis, diagnosing and treating diabetes, obesity, hypertension and cardiovascular disease, as well as screening for compounds that can modulate or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and hypotensive activities. This polypeptide sequence is a human homologue of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel method for identifying genes that are over-expressed in adipose tissue and as such it provides targets for anti-
cobesity pharmaceutical compositions. Secifically, it refers to a high mobility group I-C protein (HMGI-C) that is associated with obesity and is epistatic to leptin, furthermore, it refers to the ob gene where an autosomal recessive trait is linked to obesity and diabetes. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             human; adipocyte specific; adipose tissue; anti-obesity; high mobility group I-C protein; HMGI-C; obesity; leptin; ob; adipogenesis; hypertension; cardiovascular disease; anorectic; antidiabetic; hypotensive; leukocyte common antigen.

The composition and methods are useful for detecting, concers and amethod for inhibiting the expression of CCA gene in a cell The composition and methods are useful for detecting, cancer and a method for inhibiting the expression of cancer and amethod as are useful for detecting. The present sequence is a human CAP protein sequence. Note: The composition and electronic format directly from WIPO can from wino int/pub/nublished not sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above recombinant nucleic acid or expression vector, a microarray for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma an leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                              Sequence 1304
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            claim 18; seqid 147; 310pp; English.

                            CC comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleotide risk for myocardial infarction in the individual's caltered risk for myocardial infarction in the individual's caltered risk for myocardial infarction in the individual. The invention control of the specification or its complement and encoding any one of the amino caltered mucleic acid molecule comprising at least contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino caltered sequence given in the specification; an antibody comprising an amplified polymucleotide or its antigen-binding control of the specification and which is between about 16 and 1000 nucleotides in concleic acid molecule; a method of detecting an SNP given in the specification and which is between about 16 and 1000 nucleotides in concleic acid molecule; a method of detecting a variant polypeptide; and comprising the myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction. This sequence represents the protein of a human myocardial infarction. This sequence was not shown in the specification. The sequence has come from the specification. The sequence has come from the specification. The sequence has come from the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    20-DEC-2002;

The novel detection method has cardiant activity. The mucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or CC decreased risk for developing myocardial infarction method for preparing a comprise contains an increased or comprise contains an increased or contains and contains an increased or contains and contains an increased or contains and contains and contains an increased or contains and co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                 composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction-associated gene containing one or more SNP's of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for identifying an individual whas an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          20-DEC-2002; 2002US-0434778P

CC Over-expressed in adipose tissue and as such it provides targets for anti CC over-expressed in adipose tissue and as such it provides targets for anti CC obesity pharmaceutical compositions. Specifically, it refers to a high CC mobility group I-C protein (HMGI-C) that is associated with obesity and CI is epistatic to leptin, furthermore, it refers to the observe and CI autosomal recessive trait is linked to obesity and diabetes. The present CI invention describes performing differential gene expression analysis between the white adipose tissue (WAT) or stromal vascular tissue (SVT) CI of any two different mice selected from a group consisting of wild-type, CI HMGI-C -/- ob/ob, or HMGI-C -/- ob/ob genotype mice. Accordingly, using this method novel nucleotides and the encoded proteins thereof were CI identified that are adipocyte specific, and as such can be used for preventing adipogenesis, diagnosing and treating diabetes, obseity, These compositions exhibit anorectic, antidiabetic and CI obesity. These compositions exhibit anorectic, antidiabetic and protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying adipocyte specific genes, useful for treating obesity or diabetes, and for identifying drug targets, by differential gene expression analysis between adipose tissue or stromal vascular tissue of mice of different genotypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            murine; mouse; adipocyte specific; adipose tissue; anti-obesity; high mobility group I-C protein; HMGI-C; obesity; leptin; ob; diabetes; adipogenesis; hypertension; cardiovascular disease; anorectic; antidiabetic; hypotensive; leukocyte common antigen.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score
